Portfolio Valuation Policy - 2026

Purpose. This policy sets out how private fund investments are valued for quarterly reporting to the investment committee and to plan members.

Frequency. All fund NAVs must be updated at least quarterly. A NAV older than 120 days must be flagged as stale in reporting and escalated to the valuation committee.

Currency. Local-currency amounts are converted to CAD using the Bank of Canada daily exchange rate on the cashflow or NAV date. Missing FX rates must not be estimated; the record is held as pending until the official rate is available.

Duplicates. If an administrator file is loaded twice, the duplicate cashflows must be removed before month-end reporting, and the incident logged in the data quality register.
